

SIX DEGREES HELPS GOVERNMENT DEPARTMENT MIGRATE TO A SINGLE NETWORK ADMINISTRATION

Client Profile: Government entity I provides data center services to multiple State agencies.

Business Challenge: The client's infrastructure featured a number of clustered firewalls managed by a systems administrator group. The decision was made to migrate all equipment to a network operations group. This migration was made more difficult by the lack of written information to help guide the decision-making process.

Solution: Six Degrees performed an extensive assessment and then created policies, procedures, standards and guidelines for the continued maintenance of firewall infrastructure. In addition, Six Degrees provided training on how to use and maintain the system. This included a decision process for the maintenance of hundreds of rules and policies. Once training was completed, Six Degrees orchestrated the transfer of ownership from the old group to the new.
