

SIX DEGREES HELPS REGIONAL BANK WITH GROWING PAINS

Client Profile: Company H is one of the fastest growing regional banks in the Pacific Northwest. They offer a host of private and commercial banking services to communities throughout their multi-state service area.

Business Challenge: Over the past five years Company H has experienced rapid growth. A by-product of this success was an infrastructure that included over 100 servers and 800 desktops in multiple offices spread across three states. The Client was concerned that their expanding network lacked centralized patch management.

Solution: Six Degrees first conducted an in-depth analysis of the client's situation. This assessment included an inventory of systems and applications, prioritizing them by their importance to daily business operations. This assessment allowed Six Degrees to propose a variety of options and the tools required for a long-term solution.

Once an optimal solution was identified and approved, Six Degrees implemented these tools and processes, integrating them into the Company's existing operations and customer management policies. Six Degrees created an application dependency matrix the client could use to make decisions whether to patch as new information became available.

Finally, Six Degrees rolled out the patches necessary to keep Company H compliant with banking regulations before turning the reins of this streamlined solution over to the client's in-house operations.
