

## STATE AGENCY TURNS TO SIX DEGREES FOR VIRTUAL PRIVATE NETWORK

**Client Profile:** Government Entity K is a state agency responsible for maintaining law enforcement information for multiple city, county and state law enforcement departments.

**Business Challenge:** Government Entity K presented Six Degrees with the following question: How do we deliver sensitive law enforcement information from multiple state, county and local police departments to law enforcement personnel in the field without establishing a Physical Network with all parties?

**Solution:** Six Degrees designed a system that utilized Check Point and Nokia hardware and software technologies to create a VPN. This solution provided a high level of confidentiality, integrity and availability. But its true value lay in its ability to work in conjunction with a variety of different firewalls and VPN vendors — thereby leveraging, as much as possible, existing assets and infrastructure.
